WHY PATIENTS STAY ON YOUR PROTOCOL

THE BRAND	NOW ANSWERS TO
Thorne	**Procter & Gamble** — Thorne: $3.8 billion, announced Aug 4, 2026, pending close. New Chapter: 2012.
New Chapter	
Pure Encapsulations	**Nestlé Health Science** — Atrium purchase 2017. Vital Proteins 2020. The Bountiful purchase, $5.75 billion, 2021.
Douglas Laboratories	
Garden of Life	
Vital Proteins	
Nature's Bounty	
Solgar	
Puritan's Pride	
Metagenics	**Gryphon Investors** — Private equity. 2021, from Alticor.
Microbiome Labs	**Novonesis (was Novozymes)** — 2021, about $125 million.

NUTRIDYN

NUTRIDYN

Never sold.
The same family, three generations. Practitioner-exclusive since 1973. Not on Amazon, not at retail.

THREE REASONS PATIENTS STAY WITH THE BOTTLE YOU RECOMMENDED

1. They cannot price-shop it.
2. They have not already bought these formulas somewhere else.
3. Your rep is in your building.

Ownership as announced by the acquirers: Thorne and P&G (Aug 4, 2026), Nestlé (Atrium 2017, Vital Proteins 2020, Bountiful 2021), Metagenics and Gryphon (2021), Novozymes and Microbiome Labs (2021). Not a judgment of any formula. The Thorne transaction is pending customary approvals.

IN THE BOX

THE STARTER CASE

Eight products your patients can leave with the same day you recommend them.

Fruits & Greens

The power of 20+ servings of fruits and vegetables in one scoop. The product patients repurchase without being reminded.

Gluco IR

Healthy glucose metabolism support.

GI Integrity

Gut lining and intestinal barrier support. The most widely used formula in this territory.

UltraBiotic Akkermansia Plus

Next-generation probiotic. The one patients have not already bought somewhere else.

Inflam-Eze Plus

Everyday inflammatory and joint comfort support.

D3 10,000 with K2

Foundation. Pairs with almost every patient you see.

Omega Pure EPA-DHA 1000

Foundation omega-3. Want a liquid? Omega Pure EPA-DHA 2400.

Mag Calm Pro

Magnesium drink for the sleep and stress conversation. Raspberry lemonade.

ADD THE TO-GO DISPLAYS TO YOUR CASE

The Fruits & Greens display with to-go packets and the Hydrate display with to-go packets and patient cards. A patient tries one today and comes back for the tub.

PLACEMENT

WHERE THE CASE LIVES

HYDRATE TO-GO DISPLAY

THE STARTER CASE, AT EYE LEVEL

FRUITS & GREENS TO-GO DISPLAY

1 Checkout counter, at eye level, never behind the desk.

A case a patient cannot reach is a case a patient will not ask about.

2 Put the to-go displays beside it.

Fruits & Greens and Hydrate packets let a patient try one today. Make them part of your Starter Case.

3 Face the labels forward, one of each visible.

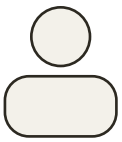

When a row goes empty, that is your reorder signal.

NOTHING BEHIND THE DESK.

If your front desk has to turn around to get it, it will not get sold.

WHAT TO SAY

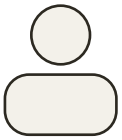

Do not sell it. Recommend it the way you recommend anything else, and hand it over before the patient leaves the room.

IN THE EXAM ROOM

"Based on what we just went over, I want you to start this today, not next week. It is the one I keep in the office because I want to know exactly what you are taking. Grab it at the front, and I will check in at your next visit to see how you are doing."

DOCTORS: leave cost out of the exam room. Price and payment belong to your trained front desk or office manager.

AT THE FRONT DESK

"That is the one Dr. _____ keeps here. I can bag it for you now, or we can ship it to your house."

Take the order before they leave. A patient who goes home planning to order online usually never does.

TO SHIP IT TO THEIR HOUSE

Sign in at nutridyn.com and place the order from your account: your practice billing, the patient's shipping address, and in the comments write "This is a drop-ship order."

THE TEXT, SENT THE SAME DAY

"Hi, this is _____ from Dr. _____'s office. Here is the one Dr. _____ talked about today: _____. You can pick it up at our office or order it online here: [your store link]. We will check in at your next visit."

Copy it as written, then put your practice name, the product and your store link in the blanks.

A FRONT DESK THAT CAN ANSWER ONE QUESTION

outsells a doctor who recommends and walks away. Give them ten minutes with this page.

WHICH CONVERSATION, WHICH BOTTLE

PROTOCOL PAIRINGS

THE CONVERSATION		THE BOTTLE IN THE CASE
BLOOD SUGAR	glucose metabolism	 **Gluco IR**
GUT AND DIGESTION	gut lining	 **GI Integrity**
	next-generation probiotic	 **UltraBiotic Akkermansia Plus**
EVERYDAY COMFORT	joint comfort	 **Inflam-Eze Plus**
SLEEP AND STRESS	the sleep conversation	 **Mag Calm Pro**
FOUNDATION FOR EVERY PATIENT	vitamin D	 **D3 10,000 with K2**
	omega-3	 **Omega Pure EPA-DHA 1000**
	the whole-food base	 **Fruits & Greens**

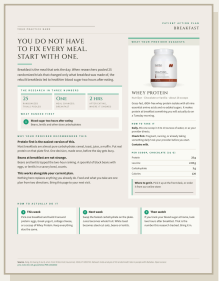

PAPER THAT MATCHES THE CASE

THE PAPER

Patient handouts, a shelf card and a front-desk card, written in patient language so the education is done before the visit ends.

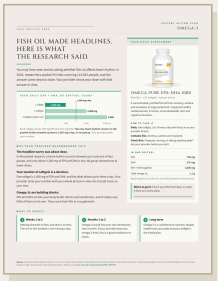

Blood sugar
PAGE 13

Breakfast protein
PAGE 15

Vitamin D
PAGE 17

Omega-3
PAGE 19

Gut comfort
PAGE 21

Daily gut
PAGE 23

Two pages each, in the back of this kit, ready to print. Your practice name goes at the top.

ON THE SHELF

ASK ABOUT THIS ONE

Dr. _____
recommends it. Scan to order it online.

YOUR STORE QR GOES HERE

NutriDyn · practitioner-exclusive since 1973

AT THE FRONT DESK

FRONT DESK CARD

At checkout, ask one question:
"Did Dr. _____ recommend something today?"

1. **Wants it now:**
   it is on the counter. Bag it.
2. **Wants it shipped:**
   order it for them before they leave.
3. **Takes it every day:**
   show them Subscribe in the online store.
4. **Two left on the shelf:**
   reorder that product today.

ORDERS BETWEEN VISITS

YOUR ONLINE STORE

The text goes out, the patient orders under your name, and every order codes to your practice.

1

The patient gets your text.

The same one on page 5.

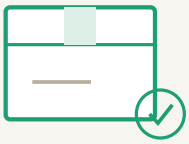

2

Orders online, under your name.

The order carries your practice name.

3

NutriDyn ships it.

To the patient's door. Nothing comes off your shelf.

4

Subscribe, and it refills.

Every month, every two months, on its own.

SUBSCRIPTIONS KEEP PATIENTS ON THE PLAN

Most foundation products can run on a subscription. The patient signs in to your online store, taps Subscribe, and picks the timing: every month, every two months, whatever fits.

They never run out between visits, they stay on the protocol you chose, and the reorders keep coming to your practice.

WHAT THE STORE DOES FOR YOUR PRACTICE

Zero inventory

Nothing on your shelf if you want it that way.

Subscriptions

The protocol keeps running between visits.

Refills from home

The patient reorders without a trip to your office.

TURNING IT ON IS ONE SHORT VIDEO.

Scan the code, or tap here: watch the store setup video.

You manage it from the same nutridyn.com login you already use.

FROM FIRST ORDER TO A PRACTICE THAT RUNS ON ITS OWN

THE FIRST NINETY DAYS

14 DAY

Your store is live and the first order is in.

DO Sign in at nutridyn.com, place your first order, and put the Starter Case (the eight products on page 3) on the front counter.

KNOW The order confirmation is in your inbox, and the Starter Case sits where patients can reach it.

30 DAY

Three products are moving.

DO Recommend from the Starter Case in every visit that fits, and hand it over before the patient leaves the room.

KNOW Three of the eight products have left your shelf.

45 DAY

Your front desk runs its own line.

DO Give the front desk page 5 and ten minutes with the Fruits & Greens.

KNOW A patient buys something when you were not in the room.

60 DAY

You restock your shelf on your own.

DO When any product on your shelf hits its last two units, reorder it.

KNOW Your shelf order went in before it ran empty, with no reminder from anyone.

90 DAY

One program or test is part of the practice.

DO Pick one: a pairing from page 6, a rung from page 10, or the Organic Acid Test.

KNOW It is on your schedule with a date.

TWO LADDERS, ONE PRACTICE. START AT THE TOP.

WHAT COMES NEXT

THE PRACTICE LADDER

1. **The Starter Case moving**
   Eight products, three moving by day 30. Page 3.

2. **Gut: the 24-day 5R program**
   Remove, Replace, Repair, Reinoculate, Retain. GI Integrity is the anchor.

3. **Toxins: the Detox Program**
   The 10-day or the 28-day program, once gut is in place.

4. **Stress: the next conversation**
   Adrenal Renew, Cortisol Pro and Neuro Balance.

THE EDUCATION LADDER

1. **Dr. Kristi Hughes, the root-cause course**
   The framework first.

2. **Dr. Rick Mayfield, Clinical Pearls**
   Six minutes on a product on your shelf, chapter by chapter.

3. **The Functional Nutrition Certification**
   Four weekend sessions at Northwestern Health Sciences University in Bloomington, Minnesota.

WANT DATA FIRST?

The Organic Acid Test, then the NutriDyn protocol that follows the report. It fits at any rung.

THE DOCTORS WHO RUN THE BIGGEST DISPENSARIES

all started with one product they understood cold.

Pick the rung that fits where you are.

WHAT THREE A DAY LOOKS LIKE

THE PRACTICE MATH

Three patients a day leave with two products each. A month is twenty clinic days. Here is what that does for your patients and for your practice.

3	×	2	×	20	=	120
patients a day		products each		clinic days		products a month

FOR YOUR PATIENTS

60

patients a month on a plan

Sixty people start the same day you recommend it, take it home in their hand, and keep it running between visits through your store.

FOR YOUR PRACTICE

$2,670

a month kept by your practice

About $6,300 in patient purchases a month at suggested retail. About $32,000 a year kept, before a single subscription refill.

The math: 120 products at the Starter Case's average suggested retail of $52.49 and average professional price of $30.27 (NutriDyn professional price list, October 1, 2026). Your prices and your mix will vary.

THEY GET BETTER. THAT IS THE REASON.

The math is what makes it sustainable to keep being the practice that finds those answers.

HOW TO REORDER

2

Reorder when any product hits its last two units.

A few

business days is standard shipping, so the last bottle is too late.

Online

Sign in at nutridyn.com. Reorder repeats your last order in one click.

Questions about an order or a backorder: email Gwen at gwen@nut-dyn.com.

NutriDyn

YOU ARE A NUTRIDYN PRACTICE.

Practitioner-exclusive since 1973. Not on Amazon. Not at retail.

These statements have not been evaluated by the Food and Drug Administration. These products are not intended to diagnose, treat, cure, or prevent any disease.

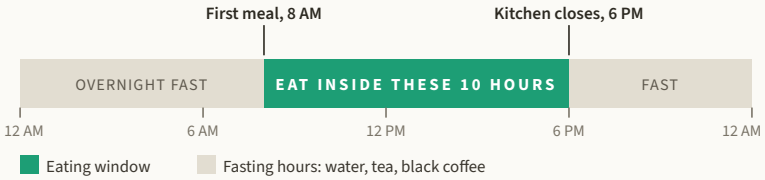

WHEN YOU EAT IS ITS OWN LEVER.

In 10 randomized trials, adults who kept their meals inside a daily eating window ended up with healthier fasting blood sugar than adults who ate on their usual schedule. No new grocery list required.

THE RESEARCH IN FOUR NUMBERS

10	599	4–10	4
RANDOMIZED TRIALS	ADULTS STUDIED	HOUR EATING WINDOWS	MONTHS, ON AVERAGE

YOUR EATING WINDOW

An example window. The trials tested 4 to 10 hours a day. **Ten hours, the widest tested, is the gentlest place to start.**

WHY YOUR PROVIDER RECOMMENDED THIS

Timing is a tool you already own.
The trials changed the hours, not the menu. You can start tomorrow morning without changing a single recipe.

Pick a window you can keep.
Windows in the research ran from 4 to 10 hours a day, for about four months. The window you keep beats the one you abandon in week three.

Three levers, one plan.
When you eat is lever one. What goes on your plate is lever two, on page 2. Your daily Gluco IR is lever three. Your provider chose all three together.

YOUR DAILY SUPPLEMENT

GLUCO IR

NutriDyn · 150 capsules · 30 servings

Promotes healthy blood glucose levels already in the normal range, with antioxidant and metabolic support. Built around GlucoVantage® dihydroberberine.

HOW TO TAKE IT

Daily. Five capsules a day, or as your provider directs.

Check first. Pregnant, nursing, or already taking something daily? Ask your provider before you start.

IN FIVE CAPSULES

Dihydroberberine (GlucoVantage®)	**100 mg**
Ceylon cinnamon bark	**500 mg**
Alpha lipoic acid	**300 mg**
Chromium (as picolinate)	**600 mcg**
Gymnema leaf extract	**200 mg**

Plus fenugreek, stinging nettle, bitter melon, green tea, banaba and biotin.

Where to get it. Pick it up at the front desk, or order it from our online store:

_____

WHAT TO EXPECT

1 Weeks 1 to 2
The window feels like a habit change, not a diet. Keep water going through the fasting hours.

2 Months 1 to 4
The stretch the research covered, about four months on average. Consistency is the whole game.

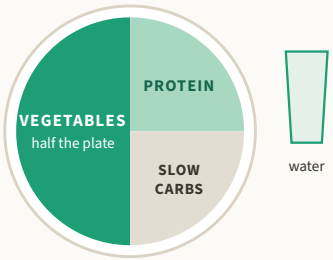

3 Long term
A pattern you keep without thinking, so each check-in reflects a habit, not a push before the appointment.

Source. Viple F, Pedersen SS, Andersen TH, et al. *Diabetologia*. 2026;69(10):2741-2758. Meta-analysis of 10 randomized trials in 599 adults with prediabetes or type 2 diabetes; eating windows of 4 to 10 hours for about 4 months. doi.org/10.1007/s00125-026-06792-5

FEWER HOURS. STEADIER PLATE.

Your window decides when. This page decides what. In a 2026 review of 25 randomized trials, low-glycemic eating (foods that raise blood sugar slowly) supported healthier fasting blood sugar, and results were stronger when people stayed with it 12 weeks or longer.

BUILD THE PLATE

Same build every meal: vegetables and protein first, slow carbohydrate last.

SIMPLE SWAPS

White bread	**Sourdough or seeded rye**
Instant oatmeal	**Steel-cut oats**
White rice	**Quinoa or barley**
White potato	**Sweet potato**
Fruit juice	**Whole fruit**
Flavored yogurt	**Plain Greek yogurt**
Chips or crackers	**Nuts or olives**

YOUR WINDOW

Windows the trials tested	**4 to 10 hrs**
Gentlest place to start	**10 hrs**
Same hours	**most days**
Water in fasting hours	**always**
Protein at your first meal	**every day**
Vegetables before starch	**every meal**

FOOD GROUP	SERVING	PER DAY	BEST CHOICES
Non-starchy vegetables	1/2 to 1 cup	4 to 6	Leafy greens, broccoli, cauliflower, peppers, zucchini, green beans. Half the plate.
Protein	4 to 6 oz cooked	3 to 4	Chicken, turkey, fish, eggs, lean beef, Greek yogurt, cottage cheese, tofu, lentils.
Healthy fats	1 tsp to 1 Tbsp	2 to 3	Extra-virgin olive oil, avocado, nuts, seeds.
Slow carbohydrates	1/2 cup cooked	1 to 2	Steel-cut oats, quinoa, barley, lentils, sweet potato. About a fist, always with protein.
Fruit	1 small or 1/2 cup	1 to 2	Berries, cherries, apple, pear, citrus. Whole fruit, not juice.
Dairy or alternatives	6 to 8 oz	1 to 2	Plain Greek yogurt, kefir, unsweetened milk alternatives. Plain, not flavored.
Fluids	8 oz	6 to 8+	Water, sparkling water, herbal tea, black coffee. All fine in fasting hours.

BEFORE YOU START

Already taking something for blood sugar? Talk with your provider before you change when you eat, since a new window can change how it works for you. Skip sugary drinks in fasting hours; they end the fast.

EVERY MEAL, SAME ORDER

Vegetables and protein first, slow carbohydrate last. Keep the same hours on weekends. Five Gluco IR capsules a day, or as your provider directs.

YOU ARE THE KIND OF PERSON
WHO DECIDES WHEN THE KITCHEN CLOSES.

Source. Sun X, Meng S, Peng W, et al. *Curr Diabetes Rev*. 2026. Meta-analysis of 25 randomized trials in 1,973 participants aged 12 to 75. pubmed.ncbi.nlm.nih.gov/42393878

These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

YOU DO NOT HAVE TO FIX EVERY MEAL. START WITH ONE.

Breakfast is the meal that sets the day. When researchers pooled 25 randomized trials that changed only what breakfast was made of, the rebuilt breakfasts led to healthier blood sugar two hours after eating.

THE RESEARCH IN THREE NUMBERS

25	ONE	2 HRS
RANDOMIZED TRIALS POOLED	MEAL CHANGED: BREAKFAST	AFTER EATING, WHERE IT SHOWED

WHAT RANKED FIRST

1. **Blood sugar two hours after eating**
   Beans, lentils and other slow carbohydrates

WHY YOUR PROVIDER RECOMMENDED THIS

Protein first is the easiest version of this.
Most breakfasts are almost pure carbohydrate: cereal, toast, juice, a muffin. Put real protein on that plate first. One decision, made once, before the day gets busy.

Beans at breakfast are not strange.
Beans and lentils topped the two-hour ranking. A spoonful of black beans with eggs, or lentils in a savory bowl, counts.

This works alongside your current plan.
Nothing here replaces anything you already do. Food and what you take are one plan from two directions. Bring this page to your next visit.

WHAT YOUR PROVIDER SUGGESTS

WHEY PROTEIN

NutriDyn · Chocolate or Vanilla · about 28 scoops

Grass-fed, rBGH-free whey protein isolate with all nine essential amino acids and no added sugars. It makes protein at breakfast something you will actually do on a Tuesday morning.

HOW TO TAKE IT

Daily. Mix one scoop in 8 to 10 ounces of water, or as your provider directs.

Check first. Pregnant, nursing, or already taking something daily? Ask your provider before you start.

Contains milk.

PER SCOOP, CHOCOLATE (32 G)

Protein	**25 g**
Leucine	**2.65 g**
Carbohydrate	**3 g**
Calories	**120**

Where to get it. Pick it up at the front desk, or order it from our online store:

_____

HOW TO ACTUALLY DO IT

1 This week
Pick one breakfast and build it around protein: eggs, Greek yogurt, cottage cheese, or a scoop of Whey Protein. Keep everything else the same.

2 Next week
Swap the fastest carbohydrate on the plate. Juice becomes whole fruit. White toast becomes steel-cut oats, beans or lentils.

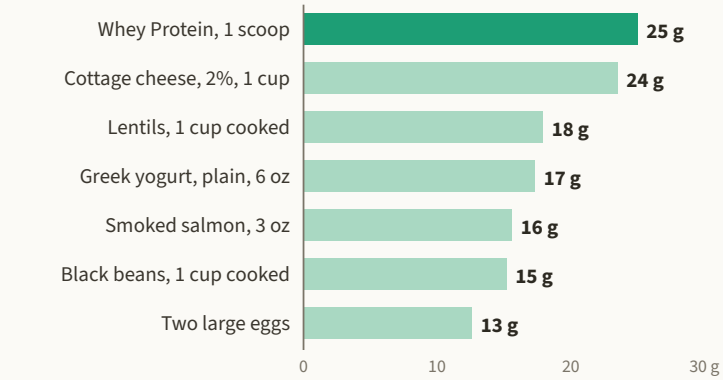

3 Then watch
If you track your blood sugar at home, look two hours after breakfast. That is the number this research tracked. Bring it in.

Source. Fang JX, Huang F, Gu Q, et al. *Front Endocrinol (Lausanne)*. 2026;17:1859725. Network meta-analysis of 25 randomized trials in people with diabetes. Open access: pmc.ncbi.nlm.nih.gov/articles/PMC13526540

WHAT TO PUT ON THE PLATE.

Protein first, then a slow carbohydrate, then something green or a piece of whole fruit. If you can name the protein on your plate before you sit down, you have already made the change.

PROTEIN ON THE PLATE, ROUGHLY

Food values: USDA FoodData Central. Whey Protein: product label. Brands vary.

SLOW CARBS THAT PAIR WELL

Beans and lentils	**Topped the two-hour ranking**
Steel-cut oats	**Slow release, familiar bowl**
Berries	**Sweetness with fiber attached**
Whole fruit, not juice	**The fiber is the point**
Avocado	**Fat and fiber slow the plate**
Sprouted or seeded bread	**When bread stays, this one**
Chia or ground flax	**A spoonful into yogurt or oats**
Nuts, a small handful	**Protein, fat and fiber together**

THREE BREAKFASTS THAT WORK

Two eggs with black beans and salsa	**+ berries**
Plain Greek yogurt with chia and walnuts	**+ berries**
Steel-cut oats with a scoop of Whey Protein stirred in	**+ fruit**

YOUR FIRST WEEK

Breakfasts built around protein	**7**
Juice swapped for whole fruit	**every day**
Beans or lentils at breakfast	**try 2**
Breakfasts skipped	**0**

THE PLATE THAT WORKED

1 Protein first
eggs, Greek yogurt, Whey Protein

2 A slow carbohydrate
beans, lentils, steel-cut oats

3 Green or whole fruit
berries, an apple, spinach in the eggs

WHAT QUIETLY UNDOES IT

Juice, sweetened coffee drinks, dry cereal, pastries and white toast on their own. None are forbidden. They just work far better with protein next to them.

YOU ARE NOT ON A DIET.
YOU ARE THE KIND OF PERSON WHO EATS A REAL BREAKFAST.

These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

YOUR PRACTICE NAME

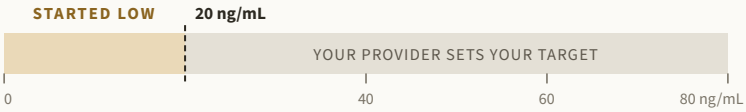

PATIENT ACTION PLAN

VITAMIN D

MOST PEOPLE GUESS AT THIS ONE. YOU ARE NOT GOING TO.

Vitamin D is the nutrient almost everyone assumes they have enough of, and almost no one has measured. You are taking the other approach: find out where you stand, then close the gap on purpose.

YOUR NUMBER

Your level today _____ **ng/mL** **Re-check on** _____

Your blood test reports vitamin D in ng/mL. **Your provider sets your target and your re-check date.**

WHY YOUR PROVIDER RECOMMENDED THIS

Your level is a number, not a feeling.
Low vitamin D usually feels like nothing at all, which is why it goes unnoticed for years. A simple blood test turns a guess into a number you can act on and re-check.

Where you start changes what you get.
Researchers pooled 45 randomized trials of vitamin D in adults, looking at markers of heart and metabolic health. Starting level and age shaped who saw changes, which is why your number comes first.

Sunshine and food rarely close a real gap.
Time indoors, sunscreen, darker skin, age and body composition all lower how much you make, even in the sunny South. Very few foods carry much vitamin D.

YOUR DAILY SUPPLEMENT

D3 10,000 WITH K2

NutriDyn · 60 softgels

High-potency vitamin D3 with vitamin K2 (as MenaQ7®) and vitamin K1. Supports bone and skin tissues, cardiovascular function and immune function.

HOW TO TAKE IT

Daily. One softgel with food, or as your provider directs. Do not take more unless your provider tells you to.

Short term, with re-checks. This dose is above the adult upper intake level for vitamin D, so it is used short term with regular blood tests.

Blood thinner? Vitamin K2 may work against blood thinners, so this formula is not recommended if you take one.

Check first. Pregnant, nursing, or taking anything daily? Ask your provider before you start.

IN ONE SOFTGEL

Vitamin D3 (cholecalciferol)	**10,000 IU**
Vitamin K2 (MK-7, MenaQ7®)	**137 mcg**
Vitamin K1	**187 mcg**

Where to get it. Pick it up at the front desk, or order it from our online store:

_____

WHAT TO EXPECT

1 Weeks 1 to 2
Honestly, not much you can feel, and that is normal. Vitamin D is not a stimulant. The win is not missing days.

2 The first months
This is when your blood level moves. Your provider re-checks it on the date they set, the only reliable way to know.

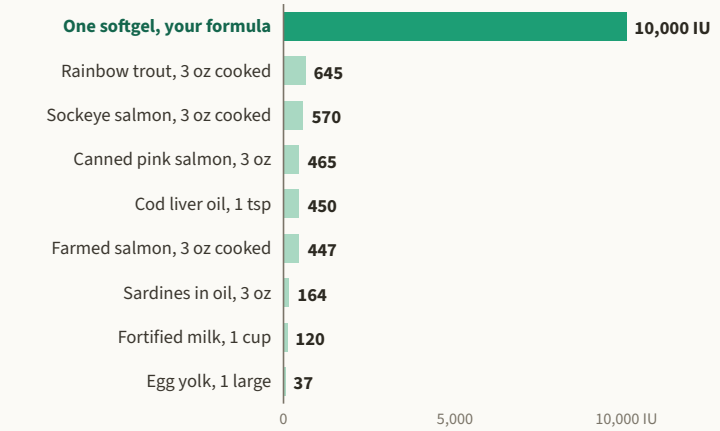

3 Long term
Once you are in range, the plan shifts from building up to maintaining, often at a lower dose. Your provider makes that call.

Source. Abumweis S, Alqadi S, Al Tarteer A, et al. *Asia Pac J Clin Nutr*. 2026;35(4):631-643. Meta-analysis of 45 randomized trials of oral vitamin D vs placebo in adults.
pmc.ncbi.nlm.nih.gov/articles/PMC13413152

EAT THE FOODS. THEN CLOSE THE REST OF THE GAP.

The list of real vitamin D foods is short, so this list is short. Use these foods to support what your softgel is doing, not to replace it.

VITAMIN D PER SERVING, ROUGHLY

Food values: USDA FoodData Central. Softgel: product label. Same scale on every bar.

BEST CHOICES

Fatty fish. Salmon, trout, mackerel, herring. The best food source by a wide margin.

Canned fish. Salmon with bones, sardines. Inexpensive and shelf stable.

Cod liver oil. Traditional and strongly flavored. Not for everyone.

Mushrooms. Only if the label says UV-exposed. Ordinary ones carry very little.

Eggs. The vitamin D is in the yolk, not the white.

Fortified foods. Milk, some yogurts and cereals. Check the label.

Vitamin K foods. Natto, aged and hard cheeses, egg yolk, butter.

WITH FOOD, EVERY TIME

Eggs at breakfast	**Yes**
Salad with olive oil	**Yes**
Avocado, nuts, seeds	**Yes**
Full-fat yogurt	**Yes**
Black coffee alone	**No**

A REALISTIC WEEK

Salmon or trout dinners	**2 to 3**
Sardines or canned salmon	**1 to 2**
Eggs at breakfast	**3 to 5**
Softgels missed	**0**

WHAT NOT TO DO

Do not add a second vitamin D product on top of this one. Multivitamins, calcium blends and some protein powders already carry vitamin D. Bring every bottle you take to your next visit.

WHY THIS BOTTLE

Vitamin D is measured in IU, and what is inside a bottle is invisible to you. Your provider chose a specific formula, dose and re-check date instead of a guess off a shelf.

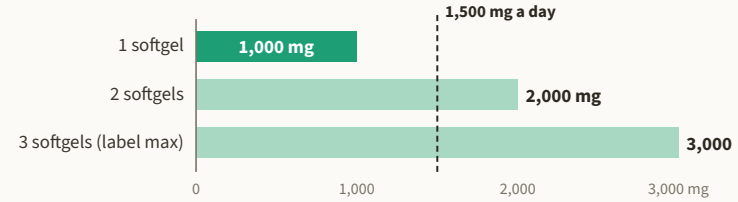

YOU KNOW YOUR NUMBER.
MOST PEOPLE NEVER LOOK.

These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

FISH OIL MADE HEADLINES. HERE IS WHAT THE RESEARCH SAID.

You may have seen stories asking whether fish oil affects heart rhythm. In 2026, researchers pooled 35 trials covering 114,592 people, and the answer came down to dose. Your provider chose your dose with that answer in view.

YOUR DAILY EPA + DHA, BY SOFTGEL COUNT

Each softgel carries 730 mg EPA and 270 mg DHA. **The only heart rhythm concern in the pooled studies showed up above 1,500 mg a day, in one group.** Your provider picks your number.

WHY YOUR PROVIDER RECOMMENDED THIS

The headline worry was about dose.
In the pooled research, a heart rhythm concern showed up in only one of four groups, and only above 1,500 mg of EPA and DHA a day. No group showed one at lower doses.

Your number of softgels is a decision.
One softgel is 1,000 mg of EPA and DHA, and the label allows up to three a day. Your provider picks your number with your whole picture in view. Do not add more on your own.

Omega-3s are building blocks.
EPA and DHA are fats your body builds into its cell membranes, and it makes very little of them on its own. They come from fish or a supplement.

YOUR DAILY SUPPLEMENT

OMEGA PURE EPA-DHA 1000

NutriDyn · 120 softgels · natural lemon

A concentrated, purified fish oil from anchovy, sardine and mackerel, in triglyceride form. Supports healthy cardiovascular, immune, musculoskeletal, skin and cognitive function.

HOW TO TAKE IT

Daily. One softgel, 1 to 3 times a day with food, or as your provider directs.

Contains fish. Anchovy, sardine and mackerel.

Check first. Pregnant, nursing, or taking anything daily? Ask your provider before you start.

IN ONE SOFTGEL

EPA	**730 mg**
DHA	**270 mg**
EPA + DHA together	**1,000 mg**
Total omega-3s	**1.1 g**

Batch tested by Eurofins for over 450 potential contaminants.

Where to get it. Pick it up at the front desk, or order it from our online store:

_____

WHAT TO EXPECT

1 Weeks 1 to 2
Nothing dramatic to feel, and that is normal. The win in this window is not missing a day.

2 Months 1 to 3
Omega-3s build into your cell membranes over months. If your provider tests your omega-3 level, this is a good window to re-check.

3 Long term
Omega-3 is a maintenance nutrient. Steady intake from your plate and your softgel is the whole plan.

Source. Abuknesha NR, O'Keefe JH, Qian F, et al. *Circ Arrhythm Electrophysiol*. 2026;19(8):e014785. Meta-analysis of 35 randomized trials, 114,592 people aged 50 and over; atrial fibrillation risk rose only in people at high cardiovascular risk taking more than 1,500 mg a day. pmc.ncbi.nlm.nih.gov/articles/PMC13489779

EAT THE FISH. COUNT WHAT ACTUALLY COUNTS.

The number that matters, on a menu or a bottle, is EPA plus DHA added together. Here is where it comes from in food, and how to read a label so the math is honest.

READING THE LABEL

Supplement Facts

Serving size: 1 softgel

EPA	**730 mg**
DHA	**270 mg**
Add them: your real dose	**1,000 mg**

On many bottles, the front-label fish oil number is not the dose.

Add EPA and DHA from the back panel. That sum is the number your provider counts.

FOOD	SERVING	EPA + DHA, ROUGHLY
Farmed Atlantic salmon	3 oz cooked	about 1,800 mg
Canned salmon or sardines	3 oz	about 800 to 1,100 mg
Trout or sockeye salmon	3 oz cooked	about 700 to 750 mg
Light tuna, canned	3 oz	about 100 to 200 mg
Cod	3 oz cooked	about 130 mg
Walnuts, flax, chia	1 oz or 1 Tbsp	0 mg EPA or DHA. They carry ALA, which your body converts only in small amounts.
Fried fish	any	Do not count it. High-heat frying damages the oils.

Food values: USDA FoodData Central. Amounts vary by species and preparation.

THE NUMBERS TO KNOW

One softgel	**1,000 mg EPA + DHA**
Label maximum, three softgels	**3,000 mg**
Where the rhythm research drew its line	**1,500 mg a day**
Who picks your number	**your provider**

A REALISTIC WEEK

Fatty fish dinners	**2 to 3**
Sardine or canned salmon lunches	**1 to 2**
Walnuts or chia as snacks	**a few**
Softgels missed	**0**

WHAT NOT TO DO

Do not stack omega-3 products without telling your provider. Fish oil, krill oil, cod liver oil and fortified foods all add to one daily total, and stacking is how people drift past 1,500 mg without deciding to.

WHY QUALITY MATTERS

Fish oil is fragile; heat, light and time oxidize it. Your softgel is batch tested by Eurofins for over 450 potential contaminants and states EPA and DHA plainly, so the dose your provider planned is the dose you get.

YOU DO NOT GUESS AT DOSES.
YOU COUNT THEM.

These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

YOUR GUT ASKED FOR FOOD. RESEARCHERS RANKED WHICH FOOD.

Across 12 randomized trials of everyday foods, simple fruit, kiwifruit and figs, ranked first, ahead of added fiber. That is why your plan starts on your plate, and why your daily scoop does a different job.

THE RESEARCH IN THREE NUMBERS

12	2	4
RANDOMIZED TRIALS RANKED	KIWIFRUIT A DAY, THE STUDIED HABIT	WEEKS, THE LENGTH OF THAT STUDY

YOUR DAY, IN THREE HABITS

Two green kiwifruit
every day, same meal

One scoop GI Integrity
in 6 to 8 oz of water

6 to 8 cups of fluid
spread through the day

WHY YOUR PROVIDER RECOMMENDED THIS

Fruit outranked the fiber tub.
In the pooled research, whole fruit ranked first for digestive comfort and everyday quality of life, ahead of added fiber. Food is not the backup plan here. It is the plan.

Two kiwis a day is the studied habit.
In the flagship study, adults ate two green kiwifruit a day for four weeks, and it supported regularity and digestive comfort. Cheap, simple, and easy to keep.

Your fruit and your scoop do different jobs.
That is why your provider paired them instead of picking one. Consistency does the work: the same fruit every day, real fluids, meals at regular times.

YOUR DAILY SUPPLEMENT

GI INTEGRITY

NutriDyn · about 28 scoops · Peach Tea, Berry, Chocolate

A naturally flavored drink mix formulated to support gastrointestinal integrity and function, healthy digestion, nutrient absorption and waste removal.

HOW TO TAKE IT

Daily. Mix one scoop with 6 to 8 ounces of water, or as your provider directs.

Check first. Do not use if pregnant or nursing. Taking anything else daily? Ask your provider before you start.

IN ONE SCOOP (8.5 G)

L-Glutamine	**3 g**
Zinc (as zinc-carnosine)	**16.1 mg**
DGL licorice root	**400 mg**
Aloe vera leaf gel	**300 mg**
Slippery elm bark	**200 mg**

Plus glucosamine HCl 1 g, apple pectin 1 g, marshmallow, chamomile, okra, cat's claw, MSM, quercetin and prune. No added sugars.

Where to get it. Pick it up at the front desk, or order it from our online store:

_____

WHAT TO EXPECT

1 Days 1 to 7
The two-kiwi habit starts. Eat them at the same meal so the habit runs itself. The win is not missing days.

2 Weeks 1 to 4
The stretch the kiwi study measured: four weeks of daily fruit. Keep the scoop going alongside it.

3 Long term
Gut health is maintenance. Keep the fruit, keep the scoop as directed, and let your provider adjust the plan at follow-ups.

Source. Gearry R, Fukudo S, Barbara G, et al. *Am J Gastroenterol*. 2023;118(6):1058-1068. Two green kiwifruit a day vs psyllium for 4 weeks in healthy adults and adults with functional constipation or IBS-C. pmc.ncbi.nlm.nih.gov/articles/PMC10226473

EAT THE FRUIT. LET THE HABIT DO THE HEAVY LIFTING.

The research ranked whole foods first, so this page is built around the grocery store. Here is what to put on the plate, how much, and the small habits that make it stick.

THE TWO-KIWI WEEK

MON	TUE	WED	THU	FRI	SAT	SUN
						

14 kiwifruit a week. Swap in figs on any day.

Ripe means it gives slightly to your thumb. Eat them at the same meal every day so the habit runs itself.

FOOD	HOW MUCH	HOW OFTEN	WHAT TO KNOW
Green kiwifruit	2 fruit	every day	The studied habit. Same meal daily.
Figs	2 to 3 fresh, or a few dried	swap days	The other fruit in the ranking. Dried figs travel well.
Water and fluids	6 to 8 cups	every day	Fruit and fiber need fluid behind them. A dry week undoes a good plate.
Whole-food fiber	build up slowly	daily	Oats, beans, lentils, vegetables. Add over weeks, not overnight.
Fermented foods	a serving	most days	Yogurt or kefir with live cultures, sauerkraut, kimchi.
Packaged, low-fluid days	as few as you can		Long stretches of packaged food and little water work against the plan.

A REALISTIC WEEK

Kiwi or fig days	**7**
GI Integrity scoops	**as your provider directs**
Cups of fluid per day	**6 to 8**
Changes made without telling your provider	**0**

MAKE IT EASY

Buy kiwis at two ripeness levels	**no gaps**
Kiwis by the coffee maker	**no forgetting**
Scoop and glass out the night before	**no excuses**
Water bottle in sight	**all day**

WHAT NOT TO DO

Do not stop or swap anything your provider already has you on without a conversation, and do not stack extra fiber products on your own. Add fiber gradually. If anything changes in a way that worries you, call our office.

WHY FOOD PLUS A FORMULA

The fruit is the food half of the plan. The scoop is where quality varies, so your provider chose a formula that states every ingredient amount, is made in a cGMP facility, and skips added sugars.

YOU ARE THE KIND OF PERSON WHO KEEPS THE FRUIT BOWL FULL.

These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure, or prevent any disease.

YOUR GUT IS A GARDEN. YOU ARE THE GARDENER.

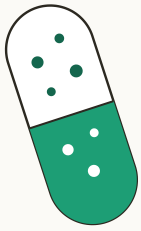

Trillions of bacteria live in your gut, and the mix matters. Your provider chose one daily capsule with five strains, including Akkermansia muciniphila, plus a food plan that feeds them. You plant. Your plate feeds.

5
STRAINS IN EVERY CAPSULE

ONE
CAPSULE A DAY

80/20
PASTEURIZED AND LIVE AKKERMANSIA

INSIDE ONE CAPSULE

Akkermansia muciniphila AH39 80% pasteurized cells, 20% live cells	**500 million TFU**
Bifidobacterium animalis HN019	**10 billion CFU**
Bifidobacterium animalis B420	**10 billion CFU**
Lactobacillus rhamnosus GG	**2 billion CFU**
Clostridium butyricum	**30 million CFU**

Amounts per capsule at time of manufacture, from the label. CFU counts live cells. TFU counts every cell, live or pasteurized.

WHY YOUR PROVIDER RECOMMENDED THIS

Akkermansia is a different kind of probiotic.
Most probiotics are Lactobacillus or Bifidobacterium. Akkermansia muciniphila is a separate species that lives in the mucus layer of the gut. Your capsule carries it alongside four other strains.

Pasteurized and live, on purpose.
Four-fifths of the Akkermansia in each capsule is pasteurized and one-fifth is live. The formula pairs both forms by design.

Feed what you plant.
Fiber from whole plants is food for the bacteria living in your gut. Page 2 is your grocery list.

YOUR DAILY SUPPLEMENT

ULTRABIOTIC AKKERMANSIA PLUS

NutriDyn · 30 or 60 capsules

A five-strain probiotic featuring Akkermansia muciniphila, in a digestive-resistant capsule. Supports a balanced gut microbiome, digestive health, healthy glucose metabolism and healthy weight management.

HOW TO TAKE IT

Daily. One capsule a day, or as your provider directs.

Check first. Pregnant, nursing, or taking anything daily? Ask your provider before you start.

Free of gluten, GMOs and dairy. Vegetarian.

MAKE IT STICK

Attach the capsule to something you never skip, like your morning coffee or brushing your teeth.

Where to get it. Pick it up at the front desk, or order it from our online store:

_____

WHAT TO EXPECT

1 Weeks 1 to 2
Nothing dramatic is the normal start. The win in this window is simply not missing days.

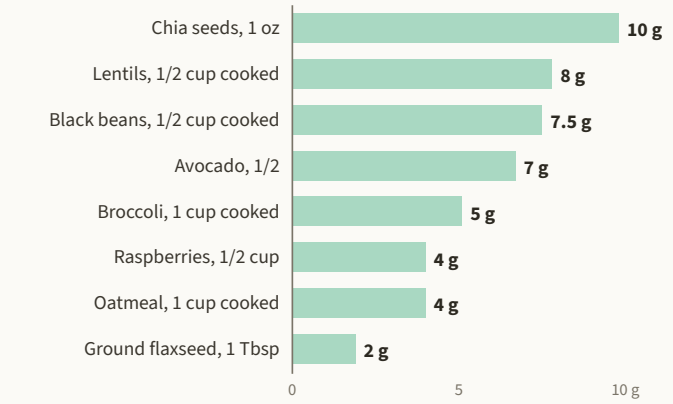

2 Weeks 3 to 8
Keep the capsule and the fiber foods going together, every day. The habits stack.

3 Long term
A probiotic is a daily habit, like brushing your teeth. Your provider will tell you how long to keep it going.

FEED WHAT YOU PLANT.

The bacteria in your capsule, and the ones already living in your gut, eat what you eat. Fiber from whole plants is their food. Build up slowly, drink plenty of water, and make the plate colorful.

FIBER PER SERVING, ROUGHLY

Food values: USDA FoodData Central. Amounts vary by brand and preparation.

FOOD	HOW MUCH	HOW OFTEN
Vegetables, every color	1/2 to 1 cup	4 to 6 a day
Beans and lentils	1/2 cup cooked	most days
Whole grains	1/2 cup cooked	1 to 2 a day
Whole fruit, skin on	1 piece or 1/2 cup	1 to 2 a day
Fermented foods	1/4 to 1/2 cup	most days
Nuts and seeds	small handful	daily
Water	8 oz	6 to 8 a day

Fermented means plain kefir, plain yogurt with live cultures, sauerkraut, kimchi or miso. Whole grains means steel-cut oats, barley, quinoa.

SIMPLE SWAPS

White bread	**Seeded whole grain**
Sweetened yogurt	**Plain yogurt and berries**
Chips	**A handful of nuts**
White rice	**Barley or quinoa**
Fruit juice	**Whole fruit**
Soda	**Sparkling water**

A REALISTIC DAY

Breakfast	**Oats, berries, ground flax**
Lunch	**Bean and vegetable bowl**
Snack	**Kefir or an apple and nuts**
Dinner	**Half the plate vegetables**
Capsule	**One, same time daily**
Water	**6 to 8 glasses**

GO SLOW

Add fiber over a few weeks, not overnight, and drink more water as you go. If anything changes in a way that worries you, call our office.

THE ONE-CAPSULE HABIT

One capsule a day, or as your provider directs. Same moment every day, and keep the fiber foods coming. The capsule plants; your plate feeds.

YOU ARE THE GARDENER.
EVERY MEAL IS A CHOICE ABOUT WHAT GROWS.
