

HER DOCTOR IS THRILLED, BUT SHE FEELS WORSE

SEVENTEEN PEPTIDES · ORGAN BY ORGAN · FOUR HOURS, FREE

Forty-eight. Six months on a GLP-1. Down twenty-two pounds. The chart reads like a victory. She is wrecked by three in the afternoon, her hair is thinning, and she says the part nobody writes down: **"I feel nothing."** She is going to ask somebody what is happening to her. The only question is whether that doctor knows.

WHEN	WHERE	SEATS	COST
29 AUGUST	RCCE 152	120	NONE
Saturday, 12 to 4	Life University, Marietta	Bring your staff	Lunch included

A peptide is a command. It sets off a biochemical chain, and that chain cannot run without raw material. **Most of what gets charted as a side effect is a nutrient deficiency wearing a costume.** Which makes it a nutrition problem, which makes it yours to solve, and squarely inside what you are licensed to recommend.

FOUR HOURS

Seventeen Peptides, Organ by Organ

Each section ends with the specific nutrient gap and the protocol. Plus the clinical lookup table: is it the peptide, or is it a deficiency?

Three Worked Cases and Five Open Discussions

Cases from your own schedule. Four hours, not a lecture.

The First Twenty Get the Protocol Kit

Essential Multi, D3 with K2, Omega Pure and Collagen Renew, plus a patient handout carrying your own practice name. Registration order decides it.

MATT CHALMERS

DC · CCCN · CCSP · QRA-M

Nearly two decades in Frisco, Texas. Clinical Chiropractic Neurologist, TEDx speaker, author of *Pillars of Wellness*, **31,000 followers on Instagram**. Quoted as an expert in *Psychology Today*. His patients include professional athletes and executives, and **medical doctors send him the cases their own protocols could not solve.**
