Understanding Insulin Resistance

Insulin is the hormone your pancreas makes to move sugar out of your blood and into your cells for fuel. In **insulin resistance**, the cells stop answering the signal well, so sugar lingers in the blood and the pancreas works harder to keep up. Years can pass this way, with normal-looking blood sugar, before it rises far enough to be called prediabetes or type 2 diabetes. Insulin resistance also feeds inflammation, high blood pressure, high cholesterol and fatty liver.

WHAT DRIVES IT

- Sugar and processed food
- Sitting most of the day
- Short or poor sleep
- Chronic stress
- Extra belly fat
- Low magnesium or vitamin D
- Family history

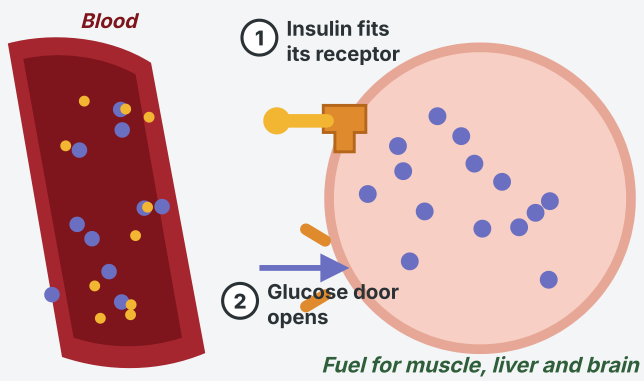

SIGNS YOU MAY NOTICE

- Sugar cravings
- Tired after meals
- Weight gain at the waist
- Hungry soon after eating
- Hard to lose weight
- High triglycerides
- Skin tags, dark skin patches

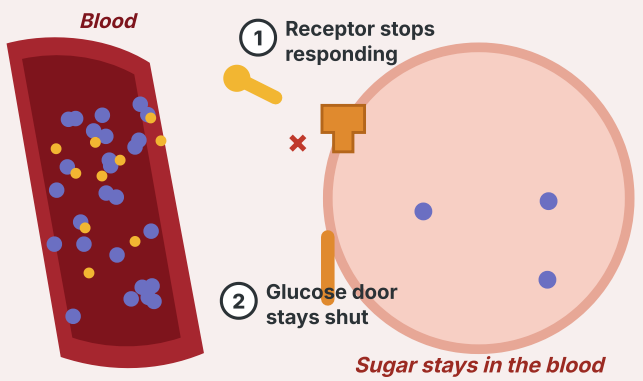

WHERE IT LEADS

- Type 2 diabetes
- Heart disease and stroke
- High blood pressure
- Fatty liver (MASLD)
- PCOS and hormone shifts
- Memory decline

NORMAL

INSULIN RESISTANCE

1 in 3 U.S. adults has prediabetes, and **more than 8 in 10** of them do not know it (CDC). A fasting insulin, glucose and A1c panel can catch insulin resistance years before diabetes.

Lifestyle-Based Medicine

Low-glycemic Mediterranean plate

- Protein first at every meal
- Half the plate vegetables
- Whole-food carbs, paired with protein or fat
- Three to five balanced meals
- Limit sugar and sweet drinks

Lower stress, better sleep

- Commit to a simple plan
- Deep breathing, 5 minutes a day
- 7 to 9 hours of sleep, same times daily
- One 10-minute mindful walk a day

Move your muscles

- Walk 10 minutes after meals
- Strength training 2 to 3 times a week
- Stand up every 30 to 60 minutes
- Moderate to hard exercise 3 to 5 days a week

Nutrient Solutions

What your body needs, and the NutriDyn formula that delivers it

All-in-one glucose support

dihydroberberine, chromium, ALA, cinnamon

START HERE

Gluco IR

150 capsules · 30 servings

- Supports healthy glucose metabolism
- Supports insulin sensitivity

IN EACH SERVING

100 mg dihydroberberine (GlucoVantage), 300 mg alpha lipoic acid, 500 mg Ceylon cinnamon, 600 mcg chromium, 200 mg gymnema, green tea

5 capsules daily
with meals

Metabolic signaling

berberine

Berberine Pro

90 capsules

- Supports healthy glucose levels already in a normal range
- Supports healthy lipid levels

IN EACH SERVING

100 mg dihydroberberine + 84 mg organic cinnamon extract per capsule

1 capsule 3 times daily
before meals

Insulin's helper mineral

magnesium

Magnesium Glycinate

60, 120, 160 or 320 capsules

- Needed for normal insulin signaling
- Low magnesium is common with high blood sugar

IN EACH SERVING

260 mg magnesium per 2 capsules, Albion chelated (di-magnesium malate, lysinate glycinate)

2 capsules, 1 to 2 times daily
with food

Balance fats

omega-3 fatty acids

Omega Pure EPA-DHA 1000

120 softgels

- Supports healthy triglyceride levels
- Supports a healthy inflammatory response

IN EACH SERVING

1,000 mg EPA + DHA per softgel (730 mg EPA, 270 mg DHA)

1 softgel daily
with your evening meal

YOUR DAILY RHYTHM

Morning
Gluco IR 3 capsules
Berberine Pro 1 capsule

Evening meal
Gluco IR 2 capsules
Berberine Pro 2 capsules
Omega Pure EPA-DHA 1000 1 softgel

Bedtime
Magnesium Glycinate 2 capsules

The full plan is **11 pills a day**. Overwhelmed? Start with the **Start here** pick, then add one product a week.

PROVIDER CHECK

- **Metformin** lowers B12 over time. Ask for a B12 check every year.
- **On diabetes medicine?** Berberine adds to sugar-lowering effects: check your glucose and tell your prescriber.
- **Berberine interacts** with some medicines (for example cyclosporine). Let your pharmacist review your list.
