

FREE • ON CAMPUS • SATURDAY AUGUST 29

Every third patient you ever treat

is going to be on one of these.

Your degree gives you **six credit hours of nutrition** across fourteen quarters. You graduate into a country where GLP-1 use is everywhere and almost nobody can explain what it does to a body. **That gap is the opportunity, and it is yours if you want it.**

WHEN	WHERE	COST	SEATS
Sat Aug 29 12:00 to 4:00 PM	RCCE 152 Right here on campus	\$0 Food included	Capped First come

What you will actually walk out with

- **Seventeen peptides, five families**, one framework that explains all of them.
- **The deficiency lookup table.** Twelve nutrients and the exact complaint each one produces. The page you keep.
- **Three worked cases** you will see within a year of graduating.
- **Why the protein number you were taught is probably wrong.**
- **What rapid fat loss releases** from adipose tissue, and the two liver phases that clear it.
- **Five open discussions.** You are in the room with practicing doctors.

THE THING WORTH UNDERSTANDING BEFORE YOU GRADUATE

A peptide is a command. It tells the body to run a biochemical sequence, and that sequence cannot run without raw material. **Most of what gets written down as a side effect is a nutrient deficiency wearing a costume.** Fatigue is ferritin, magnesium and B12. Hair loss is protein collapse and zinc. Nobody on that patient's care team is checking. You could be.

METABOLIC	GH	REPAIR	ENERGY	COGNITIVE
Semaglutide, tirzepatide	CJC-1295, ipamorelin, sermorelin	BPC-157, TB-500, KPV	MOTS-c, GHK-Cu	Semax, Selank

TAUGHT BY

Dr. Matt Chalmers, DC, CCCN, CCSP. Seventeen years in practice. TEDx speaker. Treats professional athletes and executives, and takes referrals from medical doctors when their protocols stop working. He is flying in to teach this room for free.

Scan it. Take the seat.

apdad.github.io/mission/peptide-seminar

Or find **Asher Allen** on campus, or email asher@nutri-dyn.com.

Hosted and paid for entirely by NutriDyn.

Her doctor is thrilled.

She feels worse than before she started.

Forty-eight. Six months on a GLP-1. Down twenty-two pounds. The chart looks like a win. She is wrecked by three in the afternoon, her hair is thinning, she has lost muscle she cannot get back, and she says the part nobody writes down: **"I feel nothing."**

She is going to walk into somebody's office and ask what is happening to her. The only question is whether that doctor knows the answer.

WHEN	WHERE	SPEAKER	COST
Sat Aug 29 12:00 to 4:00 PM	Life University RCCE Rm 152, Marietta	Dr. Chalmers DC, CCCN, CCSP	Free NutriDyn covers it

THE PREMISE OF THE WHOLE AFTERNOON

A peptide is a command. It sets off a biochemical chain, and that chain cannot run without raw material. **Most of what gets charted as a side effect is a nutrient deficiency wearing a costume.** Which makes it a nutrition problem. Which makes it yours to solve, and squarely inside what you are licensed to recommend.

What is covered

- **Seventeen peptides, five families**, organ by organ, each ending in a protocol.
- **"Is it the peptide or a deficiency?"** The clinical lookup table.
- **Three worked cases** you will recognize from your own schedule.
- **The protein myth**, and why leucine timing beats total grams.
- **The detox load** rapid fat loss creates, and the two phases that clear it.
- **Five open discussions.** Four hours, not a lecture.

Why now

- **Compounded semaglutide and tirzepatide are gone.** Patients who paid a couple hundred a month face brand pricing or quitting.
- **The federal picture is moving.** In July an FDA advisory committee voted to recommend several peptides for compounding, including BPC-157. Advisory only, nothing has changed in law yet, but the direction is clear.
- **Georgia is enforcing.** Unannounced board inspections and hundreds of open investigations disclosed in June. Knowing where your scope stops has never mattered more.

FIRST TWENTY REGISTRATIONS GET THE PROTOCOL KIT

Not a drawing. Twenty register, twenty walk out with a box: **physical samples of the core stack, a patient handout carrying your practice name** for the patient who is on a GLP-1 and frightened, and **the deficiency lookup table, printed.** Registration order decides it and nothing else does.

Save your seat
