Patient name _____ Date _____

Polycystic Ovary Syndrome

PCOS, now also called PMOS

PCOS is a common hormone condition. The ovaries make extra **androgens**. These are male-type hormones like testosterone; women normally make a little. Too much can upset periods, ovulation (releasing an egg) and fertility, and it shows up in skin, hair, weight and mood. Genes play a part, but in most women with PCOS **insulin resistance** (cells answer insulin poorly) helps drive it. That is why food, movement, sleep and stress change how PCOS behaves.

1 **The pancreas makes insulin.** Insulin moves sugar out of the blood and into your cells for fuel.

2 **Cells answer insulin poorly.** So the pancreas pumps out extra insulin to keep sugar in check.

3 **Extra insulin reaches the ovaries.** The ovaries make extra androgens, and eggs get stuck in follicles (the "cysts").

KEY

- **Glucose** sugar in the blood
- **Insulin** lets sugar into cells
- **Red blood cell**
- **Pancreas** makes insulin
- **Bloodstream** carries insulin all over
- **Androgens** male-type hormones
- **Follicle** egg sac, the "cyst"
- **Fallopian tube** carries eggs

SIGNS AND SYMPTOMS

- Irregular or missed periods
- Acne
- Extra facial or body hair
- Thinning scalp hair
- Weight gain at the waist
- Fatigue
- Mood changes, anxiety
- Trouble getting pregnant
- Dark skin patches (neck, armpits)
- Skin tags

PCOS FACTS

About **1 in 8** women of childbearing age has PCOS, and up to **7 in 10** of them have never been diagnosed. It happens at every body size, even at a healthy weight. Adults are diagnosed with **2 of 3**: irregular periods, high androgens (a blood test or signs like extra hair) or many follicles on ultrasound (or a blood test showing high AMH, a follicle hormone), once other causes are ruled out. You can have PCOS without "cysts."
In 2026 experts renamed it polyendocrine metabolic ovarian syndrome (**PMOS**), because the "cysts" are really stalled egg follicles. Same condition, same tests.

RISK FACTORS

- **Runs in families:** a mother or sister with PCOS or type 2 diabetes raises your risk.
- **Diabetes:** type 1 or 2 raises the risk.
- **Can make it worse (you can change):** weight gain at the waist, a high-sugar diet, sitting most of the day, poor sleep, stress and hormone-disrupting chemicals (in some plastics and fragrances).

Why it matters: PCOS raises the risk of type 2 diabetes, heart disease and sleep apnea (breathing pauses in sleep), so ask your doctor about a blood sugar test. Long gaps between periods can thicken the womb lining, so tell your doctor if yours are often months apart.

Lifestyle Recommendations

Protein first
Start every meal with protein. Never eat carbs on their own, and skip sugary drinks.

Feed your gut
Plain kefir, yogurt or sauerkraut daily, plus 4 to 6 servings of vegetables.

Move and lift
At least 30 minutes on most days, plus strength work 2 days a week.

Sleep 7 to 9 hours
Snoring or always tired? Ask about sleep apnea.

Spearmint tea
Two cups a day. In a small 30-day study, testosterone came down.

Nutrient Solutions

What your body needs, and the NutriDyn formula that delivers it

START HERE

Ovaries and cycles
myo- + D-chiro-inositol

Myo-Inositol Complex
180 capsules · 30 servings

- Supports healthy ovaries and cycles ◆
- Supports optimal blood glucose balance ◆

IN EACH SERVING
6 capsules: 3,902 mg myo-inositol + 97 mg D-chiro-inositol (40:1), 200 mcg chromium, 500 mg fenugreek seed extract, 300 mg Ceylon cinnamon

3 capsules twice daily
morning and evening

Blood sugar and insulin
berberine + cinnamon

Berberine Pro
90 capsules

- Promotes healthy glucose metabolism ◆
- Supports heart health and lipid balance ◆

IN EACH SERVING
Per capsule: 100 mg dihydroberberine + 84 mg organic Ceylon cinnamon extract

1 capsule 3 times daily
before meals

Vitamin D
D3 5,000 IU with K2

D3 5000 with K2
60 softgels

- Supports healthy vitamin D levels ◆
- Supports mood, bone and immune health ◆

IN EACH SERVING
5,000 IU (125 mcg) vitamin D3, 60 mcg vitamin K2 (MK-7), 15 mcg vitamin K1

1 softgel with dinner
short-term; check your level

Essential omega-3 fats
EPA + DHA from fish oil

Omega Pure EPA-DHA 1000
120 softgels

- Supports healthy heart function ◆
- Supports healthy immunity and skin ◆

IN EACH SERVING
Per softgel: 1,000 mg EPA + DHA (730 mg EPA, 270 mg DHA)

1 softgel twice daily
with breakfast and dinner

Gut and hormones
7-strain probiotic

UltraBiotic Daily Multi-Strain
30 or 60 capsules

- Supports a healthy gut microbiome ◆
- Promotes healthy hormone function ◆

IN EACH SERVING
30 billion CFU, 7 strains: 4 Lactobacillus, B. lactis, Bacillus coagulans, S. boulardii

1 capsule with a meal
give it 12 weeks

YOUR DAILY RHYTHM

Morning
- Myo-Inositol Complex 3 capsules
- Berberine Pro 2 capsules: 1 before breakfast, 1 before lunch
- Omega Pure EPA-DHA 1000 1 softgel
- UltraBiotic Daily Multi-Strain 1 capsule

Evening meal
- Myo-Inositol Complex 3 capsules
- Berberine Pro 1 capsule before dinner
- D3 5000 with K2 1 softgel
- Omega Pure EPA-DHA 1000 1 softgel

The full plan is **13 pills a day**. Overwhelmed? Start with the **Start here** pick, then add one product a week.

PHARMACIST CHECK

Keep taking your medicines.

- **Trying to get pregnant, pregnant or nursing?** Do not take Berberine Pro. Myo-Inositol Complex has fenugreek, which is not advised in pregnancy: ask your pharmacist before taking it or the rest.
- **Keep any prescribed medicine.** On insulin or a sulfonylurea (such as glipizide)? Ask the prescriber before you start Berberine Pro or Myo-Inositol Complex, and watch for low blood sugar. Berberine can also slow the liver enzymes (CYP3A4, 2D6, 2C9) that clear many drugs: ask your pharmacist to check your list.
- **On a blood thinner?** The label says D3 5000 with K2 is not recommended: its vitamin K (K1 and K2) works against warfarin. Fish oil and fenugreek can also add to bleeding risk. Ask your pharmacist about a vitamin D without K.
- **Allergic to fish, peanuts or chickpeas?** Omega Pure is fish oil, and the fenugreek in Myo-Inositol Complex, a legume like peanuts, can trigger it too: ask first.
- **The pill** can lower B6, B12, folate, magnesium and zinc, and **metformin** can lower B12 over time: ask about a check.
