Patient name _____ Date _____

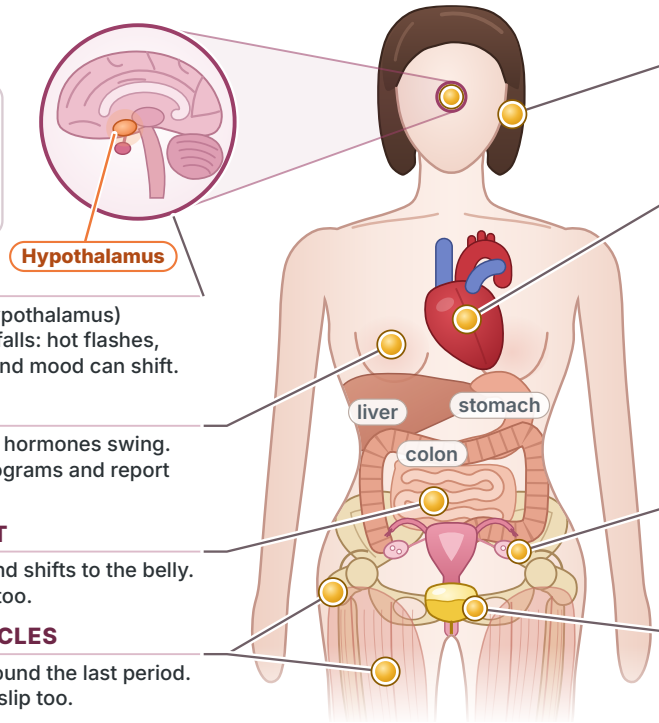

Menopause and Perimenopause

Every system changes. Every system can be supported.

Menopause is the day you reach **12 months in a row with no period**, on average around age 51. The years before it, **perimenopause**, often last 4 to 8 years while estrogen and progesterone swing, then fall. These hormones act on nearly every tissue, so changes show up head to toe. **Hormone therapy works best for hot flashes**: ask your doctor if it fits you.

ONE WOMAN, EVERY SYSTEM

KEY
- Where a change can show up
- Blood rich in oxygen
- Blood low in oxygen

BRAIN
Its thermostat (the hypothalamus) misfires as estrogen falls: hot flashes, night sweats. Sleep and mood can shift.

BREASTS
Can feel tender while hormones swing. Keep up with mammograms and report any new lump.

GUT AND WEIGHT
Fat gain speeds up and shifts to the belly. Gut bacteria change too.

BONES AND MUSCLES
Bone thins fastest around the last period. Muscle and strength slip too.

SKIN AND HAIR
Less collagen, so skin gets thinner and drier. Hair can thin.

HEART AND VESSELS
LDL (bad) cholesterol tends to rise, so heart risk climbs. Know your numbers.

OVARIES AND UTERUS
Eggs run low, so hormones swing, then fall. Periods change, then stop. You can still get pregnant, so use birth control until 12 months with no period.

See your doctor for any bleeding after menopause, very heavy periods, periods closer than 3 weeks apart, bleeding after sex, or these changes before 45.

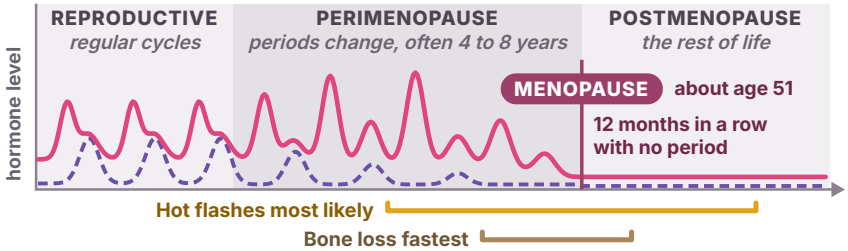

BLADDER AND VAGINA
Dryness, painful sex, urgency and bladder infections. Common and treatable.

WHY HOT FLASHES HAPPEN

Low estrogen shrinks the brain's comfort zone for body heat, so a small rise sets off a hot flash, often followed by chills.

HOW YOUR HORMONES CHANGE

KEY Estrogen · Progesterone · Life stages · Comfort zone · Body heat · Hot flash

Track your symptoms

Circle in pen today; at 6 weeks, use a new color.

Circle **0** none, **1** mild, **2** bothers you some days, **3** bothers you most days.

Hot flashes or night sweats	0 1 2 3	Poor sleep	0 1 2 3	Mood or anxiety	0 1 2 3
Vaginal dryness	0 1 2 3	Bladder infections	0 1 2 3	Low sex drive	0 1 2 3
Weight change	0 1 2 3	Sore breasts	0 1 2 3	Headaches	0 1 2 3
Brain fog	0 1 2 3	Joint or muscle pain	0 1 2 3	Hair changes	0 1 2 3

Add them up. Bring this to your visit. **Today** ____ / 36 **In 6 weeks** ____ / 36

Hot flashes: what works best

1. **Hormone therapy works best.** For most healthy women under 60, the benefits outweigh the risks. It needs a prescription, so ask your doctor.
2. **Also proven:** CBT (a brief talk therapy), clinical hypnosis and some prescriptions.
3. **Supplements** are not proven for hot flashes. If you try one, score your symptoms again at 6 weeks to see whether it helps.

Lifestyle Recommendations

Lift weights
Strength work 2 to 3 days a week guards muscle and bone.

Walk most days
150 minutes a week helps your heart, mood, sleep and weight.

Bone-smart plate
Protein at each meal and calcium foods like yogurt and greens.

Guard your sleep
Same bedtime, a cool dark room, less alcohol and late caffeine.

Try talk therapy
CBT (a talk therapy) and hypnosis are proven to ease hot flashes.

Skip smoking
Smoking speeds bone loss and raises heart risk.

Nutrient Solutions

What your body needs, and the NutriDyn formula that delivers it

Menopausal comfort

START HERE

EstroG-100 and ashwagandha

Menopause Support
90 tablets

- Supports comfort through menopause ◆

- ☐ **Menopause Support**: no period for a year or more
- ☐ **PeriMenopause Support**, 30 tablets: period in the past year

IN EACH SERVING
500 mg EstroG-100 blend, 250 mg ashwagandha, 80 mg black cohosh. **Peri:** 500 mg each EstroG-100 and ashwagandha, 100 mg milk thistle

1 tablet daily
with food, same time daily

Sleep and calm

magnesium, myo-inositol, L-theanine

Mag Calm Pro
About 60 scoops
Raspberry Lemon

- Supports relaxation and restful sleep ◆
- Supports a healthy stress response and mood ◆

IN EACH SERVING
200 mg magnesium (as malate), 2 g myo-inositol, 500 mg taurine, 100 mg L-theanine, 5 mg vitamin B6

1 to 2 scoops daily
in 6 oz water · try bedtime

Vitamin D

only if your level is low

D3 5000 with K2
60 softgels

- Supports bone health when a blood test shows low vitamin D ◆
- K2 helps put calcium to work in bone ◆

IN EACH SERVING
5,000 IU (125 mcg) vitamin D3, 60 mcg vitamin K2 (MK-7), 15 mcg vitamin K1

1 softgel daily
test first · with a meal

Good bacteria

women's probiotic, 9 strains

UltraBiotic Women's
60 capsules · 30 servings

- Supports healthy vaginal bacteria ◆
- Supports healthy gut bacteria ◆

IN EACH SERVING
25 billion CFU (live bacteria, at manufacture) from 9 strains: 7 Lactobacillus and 2 Bacillus

2 capsules daily
same time each day

Muscle and strength

creatine monohydrate

Creatine Powder
505 g · about 100 scoops

- Supports muscle and strength with strength training ◆
- 5 g a day plus training helped in studies after menopause ◆
- Can raise creatinine on kidney blood tests

IN EACH SERVING
5 g creatine monohydrate per scoop

1 scoop daily
in 8 to 16 oz of any drink

YOUR DAILY RHYTHM

Morning
Menopause Support
1 tablet, or
PeriMenopause Support

Evening meal
D3 5000 with K2
1 softgel, if vitamin D is low
Creatine Powder
1 scoop

Bedtime
Mag Calm Pro
1 scoop
UltraBiotic Women's
2 capsules

The full plan is **4 pills and 2 scoops a day**. Overwhelmed? Start with the **Start here** pick, then add one product a week.

PROVIDER CHECK

Keep taking your medicines.

- **Pregnant, could be, or nursing? Ever had breast cancer or another estrogen-fed cancer?** The labels say Menopause and PeriMenopause Support are not for you.
- **Liver disease, dark urine, or yellow skin or eyes?** Stop Menopause or PeriMenopause Support and call your doctor: black cohosh and ashwagandha can rarely harm the liver.
- **Warfarin or another blood thinner?** The label does not recommend D3 5000 with K2. **Thyroid pills, or drugs that make you sleepy?** Ashwagandha can add to them.
- **Vitamin D:** test first, use short-term, recheck; 5,000 IU is over the 4,000 IU upper limit. **Kidney disease?** Ask your provider before Mag Calm Pro or Creatine.
- **Doxycycline, ciprofloxacin or similar antibiotics?** Take them 2 hours before or 4 to 6 hours after Mag Calm Pro. Keep alendronate (a bone drug) 2 hours apart, and thyroid pills 4 hours.
