

PCOS is not a willpower problem. *It runs on your metabolism, and metabolism responds.*

A 2026 meta-analysis of 11 randomized trials in 780 women with PCOS (Sun Z et al., *BMC Endocrine Disorders*) found that daily probiotic or synbiotic supplementation significantly lowered total testosterone, triglycerides, LDL cholesterol, BMI and body weight, and raised HDL cholesterol. Your provider's plan does the heavy lifting. This is the part you get to run yourself, once a day, starting tonight.

WHY YOUR DOCTOR RECOMMENDED THIS

- **First, what this actually is.**
A probiotic is a dose of live, friendly organisms: the same kinds of bacteria that already live in a healthy digestive tract. You are not adding a drug or a hormone. You are restocking a population that most of us run short on, and then feeding it well. That is the whole idea.
- **Your gut has a say in your hormones.**
The bacteria living in your digestive tract influence how your body handles blood sugar, cholesterol and hormones. In the 2026 analysis, women taking a daily probiotic saw total testosterone come down. That is the marker sitting behind a lot of what bothers you most about PCOS.
- **PCOS is a metabolic condition, not only an ovarian one.**
The same analysis found lower triglycerides and LDL cholesterol and higher HDL. Those are the numbers that track your long-term heart and metabolic health, which is exactly why your provider watches them alongside your cycle.
- **It is one capsule, and it works alongside everything else.**
This is a support, not a substitute. If you are on medication for PCOS, keep taking it exactly as prescribed. Food, movement, your prescription and this capsule all pull in the same direction, and you do not have to choose between them.

YOUR DAILY SUPPLEMENT

UltraBiotic Daily Multi-Strain

NutriDyn | Practitioner Exclusive

A seven-strain blend of friendly organisms delivering 30 billion CFU in one capsule, formulated to support a healthy gut microbiome, aid digestion of the nutrients in your food, support a healthy inflammatory response, support healthy immune function and promote healthy bowel function.

HOW TO TAKE IT

Daily Dose: 1 capsule

Best Time: With a meal, same time each day

Duration: Daily, ongoing

With medication: Follow your provider's dosing guidance

KEY INGREDIENTS

- **Lactobacillus blend**
Four strains, including acidophilus and plantarum. The most studied family of friendly bacteria for digestive and metabolic support.
- **Bifidobacterium lactis**
Lives mainly in the large intestine and supports comfortable, regular bowel function.
- **Saccharomyces boulardii**
A friendly yeast rather than a bacterium, so it keeps working even if you are prescribed an antibiotic.
- **Bacillus coagulans**
A hardy spore-forming strain built to survive stomach acid and arrive in the gut intact.

WHAT TO EXPECT

Weeks 1 to 2

Digestion and regularity are usually the first things to settle. A few days of mild gas or bloating while your gut adjusts is common and normal. Results vary by person.

Month 1 to 3

This is the window the trials measured. If your provider tracks testosterone, triglycerides or cholesterol, this is a reasonable point to ask about rechecking them.

Long term

Being straight with you: in that same research, fasting blood sugar and insulin resistance scores did not reliably change. This is one lever, not the whole plan. Keep the food, the movement and your prescription.

YOUR FOOD FOUNDATION

Feed the Bacteria You Just Paid For.

Two things make this work together. A 2026 systematic review of 25 randomized trials in 1,973 people across diverse populations (Sun X et al., *Current Diabetes Reviews*) found that low-glycemic-index eating significantly lowered fasting blood glucose, HbA1c and LDL cholesterol, with the strongest results in people who stayed with it 12 weeks or longer. And the word "synbiotic" in your PCOS research simply means a probiotic paired with the fiber that feeds it. Fiber and fermented food are what these organisms actually eat, so what is on your plate decides how much of your capsule goes to work.

Food Group	Serving	Per Day	Best Choices
Protein	4 to 6 oz cooked	3 to 4	Chicken, turkey, fish, eggs, lean beef, Greek yogurt, cottage cheese. Protein blunts the blood sugar rise from anything you eat with it, so start here at every meal.
Non-Starchy Vegetables	1/2 to 1 cup	4 to 6	Leafy greens, broccoli, cauliflower, asparagus, peppers, zucchini, Brussels sprouts. This is the fiber your gut bacteria feed on. Aim for more color, not less.
Fermented Foods	1/4 to 1/2 cup	1 to 2	Plain kefir, plain yogurt with live active cultures, sauerkraut, kimchi, miso. Live cultures on your plate alongside the ones in your capsule.
High-Fiber Carbs	1/2 cup cooked	1 to 2	Steel-cut oats, quinoa, barley, lentils, beans, chickpeas, sweet potato. These are the low-glycemic choices from the research above.
Fruit	1 small or 1/2 cup	1 to 2	Berries, apple, pear, citrus. Eat it whole with the skin on. Juice removes the fiber that makes fruit work in your favor.
Healthy Fats	1 tsp to 1 Tbsp	2 to 3	Extra-virgin olive oil, avocado, nuts, seeds, ground flax. Fat slows digestion, which steadies blood sugar.
Fluids	8 oz	6 to 8+	Water first, herbal tea, unsweetened. Fiber needs water to do its job comfortably.

SWAP HIGH GLYCEMIC FOR LOW		FIBER PER SERVING (APPROX.)	
White rice	quinoa or barley	Lentils, 1/2 cup cooked	8 g
White bread	100% whole grain	Black beans, 1/2 cup	7 g
Instant oatmeal	steel-cut oats	Chia seeds, 1 Tbsp	5 g
Fruit juice	whole fruit	Avocado, 1/2 medium	5 g
Sweetened cereal	yogurt + berries	Broccoli, 1 cup cooked	5 g
Pretzels or chips	nuts or seeds	Raspberries, 1/2 cup	4 g
Soda	sparkling water	Steel-cut oats, 1/2 cup cooked	4 g
Flavored yogurt	plain + fruit	Ground flax, 1 Tbsp	2 g

Always avoid: Sugar-sweetened drinks, which move blood sugar faster than almost anything else you can consume; skipping meals and then overeating at night; "fat free" or "light" products that replace the fat with added sugar; and eating carbohydrates completely on their own, without protein or fat to slow them down.

Quality matters: Take your capsule with a meal at the same time each day, and store it as directed on the bottle. Choose plain yogurt and kefir rather than the sweetened kind, since the added sugar works against the very numbers you are trying to move. Give it 12 weeks before you judge it. That is the window where the research saw change.
